

Polyethylene Borlink™ LE0520

Crosslinkable Semiconductive Compound

Description

Borlink LE0520 is a crosslinkable black polyethylene compound, specially designed for semiconductive strippable insulation screen of energy cables.

Applications

Borlink LE0520 is designed for semiconductive strippable insulation screens in medium voltage cables.

Specifications

Borlink LE0520 meets the applicable requirements as below when processed using sound extrusion practices and testing procedures

ANSI/ICEA S-94-649
ANSI/ICEA S-97-682
ANSI/ICEA S-93-639
BS 6622
NF C33-223

UTE C 33-223
NF C33-226
UL 1072
IEC 60502-2
AEIC CS8

Special features

Borlink LE0520 is a ready-to-use semiconductive compound. It provides low strip forces over a broad temperature range when used over Borealis crosslinkable polyethylene insulation compounds. Borlink LE0520 is designed to have reduced deposits in continuous vulcanization tubes.

The excellent distribution of carbon black and additives in Borlink LE0520 results in a smooth semiconductive screen.

Physical Properties

Property	Typical Value Data should not be used for specification work	Test Method
Density (23 °C)	1170 kg/m ³	ASTM D 792
Tensile Strain at Break (20 In/min) ¹	280 %	ASTM D 638
Tensile Strength (20 In/min) ¹	2,300 psi	ASTM D 638
Tensile Strength (20 mm/min) ¹	16 MPa	ASTM D 638
Tensile Strength Retention (168 h, 136 °C) (42 d, 100 °C) ¹	> 90 %	ASTM D 638
Tensile Elongation After Ageing (168 h, 136 °C) (42 d, 100 °C) ¹	> 250 %	ASTM D 638
Brittleness temperature	< -35 °C	ASTM D 746

¹ Measured on crosslinked specimens

Polyethylene Borlink LE0520

Electrical Properties

Property	Typical Value	Test Method
	Data should not be used for specification work	
DC Volume Resistivity (23 °C)	100 Ohm.cm	ASTM D 991
DC Volume Resistivity (90 °C)	350 Ohm.cm	ASTM D 991

Other properties

Property	Typical Value	Test Method
	Data should not be used for specification work	
Cable Strip Force (90° peel)	9 - 12 lbs/½ inch	Borealis Method
Cable Strip Force (90° peel)	3 - 6 kN/m	AEIC CS8

Processing Techniques

Borlink LE0520 provides excellent surface finish and outstanding output rates, when processing conditions are optimized for the actual processing equipment and cable dimensions. Optimal conditions may vary according to the equipment used.

The required extrusion melt temperature range is approximately 240 to 260°F (115 to 125°C). Lower melt temperatures may result in a poorly mixed, uneven extrudate and higher melt temperatures may result in extrudate pre-cure or scorch. The feed section of the extruder should be water cooled. The curing configuration should be carefully controlled, and the maximum cable surface temperature in the curing tube should be maintained below 280°C (535 °F).

To produce a good and reliable cable, it is essential to ensure careful and clean handling of semiconductive material. Hence all material handling should preferably be conducted in closed systems. Please contact your Borealis representative for more details.

Typical processing temperature ranges for Borlink LE0520 are shown below:

Hopper drying (4 h)	40 °C	With dehumidified air
	104 °F	
Melt temperature	115 - 125 °C	With dehumidified air
	240 - 260 °F	

Packaging

Package: Smallbins

 Polyethylene
Borlink LE0520**Storage**

Borlink LE0520 has a shelf life of 12 months from delivery date if stored in unopened original packages, under dry and clean conditions at temperatures between 10 - 30 °C (50 - 85 °F). It is suggested that first-in/first-out practices be followed.

More information on storage is found in our "Safety data sheet" / "Product safety information sheet" for this product.

Safety

Please see our "Safety data sheet" / "Product safety information sheet" for details on various aspects of safety, recovery and disposal of the product. For more information, contact your Borealis representative.
