Description

Lumicene® Polypropylene M8670 is produced with TotalEnergies Petrochemicals and Refining proprietary metallocene catalyst technology. It offers exceptional optical performance and low residual content compared to standard isotactic polypropylene.

Heat Sealable: M8670 produces films with excellent heat seal performance and outstanding optical properties.

Recommended Applications:

M8670 is designed for use as a surface and heat sealable layer in the production of coextruded films, biaxially oriented or cast, due to its excellent optics, very low extractables and good sealant properties.

Processing:

M8670 is a narrower molecular weight distribution product than conventional propylene copolymers. M8670 processes well on film extrusion equipment with typical melt temperatures of 390-450°F (200-232°C)
