Polypropylene Z9450

Technical Data Sheet
Polypropylene – Random Copolymer
Produced in the United States

Description

Polypropylene Z9450 is a low melting, high ethylene random copolymer with improved color, optics and impact properties.

Heat Sealable: The very low melting point of Z9450 makes it an excellent heat seal layer for oriented films.

FDA: Z9450 is recommended for use in non-oriented film processes for manufacture of packaging films that require improved optical and impact properties and as a heat seal layer for oriented films.

Recommended Applications: Z9450 is recommended for use in non-oriented film processes for manufacture of packaging films that require improved optical and impact properties and as a heat seal layer for oriented films.

Processing: Z9450 resin processes on film extrusion equipment with typical melt temperatures of 380°F-440°F (193°C-227°C).
